### Project Plan

Title	Hours	Reasoning
Project Plan	1	I believe it will take some researching and gathering of opinions from teammates in order to provide an accurate estimation of the project layout.
Data Attribute Collection	2	Based on the attribute collection done in lecture, four hours should be plenty of time to browse weather.com in its entirety and record all important data elements along with functions present on the pages.
User Requirement Specification	3	It will most likely take a couple hours in order to gather all of this information correctly.
Test Plans, Testing	4	Testing is a very important part and this is where any issues will be addressed and dealt with so a lot of time should be allocated to this portion.
ER Model, Normalized Databases	7	The model may not take too much time but the database aspects will most likely since it

		is a new subject for us.
High Level Design	10	This portion has the same reasoning as the previous portion in the sense that we are inexperienced in this area so it will take some time to get right.
Working Software Deliverable Iteration 1	15	We are all new to databases so it will most likely take us a while to create one and get everything running correctly.
Working Software Deliverable Iteration 2	10	I gave this section a large chunk of time because it will involve using a lot of new things, it shouldn't take as much time as the first iteration however because we will be building off of the preexisting first iteration.
Final Presentation	3	Although this is the presentation part, most of the work that the presentation consists of will be the actual content creation which will have been already done up to this point. The time that will go into this section will be making things aesthetically pleasing and rehearsing the presentation once completed.
<b>TOTAL</b>	<b>55</b>	<b>&lt;- Very Rough Estimate</b>

Teammate	Estimated Hours To Complete	Hours Available (Per Week)
Tristan Simonson	75	5
Isaac Cough	60	5
Julian Macalindong	35	6
Reed Stock	60	5
<b>AVERAGE</b>	<b>57.50</b>	<b>5.25</b>
